

## CHANGES TO SPECIFICATION

At page 1, line 8

Royal Philips Electronics of the Netherlands (hereafter "Philips") is presently developing miniature optical disc drives using blue laser technology which can store up to 1 Gigabyte of data on a single-sided removable, optical disc of just 30mm in diameter. This work is further described in Philips' press release entitled "Philips Develops Technology for Small Form Factor Optical Storage" dated 18 June, 2002 and available from Philips's website at ~~www.newscenter.philips.com~~the newscenter, a copy of which has been submitted in the filewrapper, along with the full URL.
